

## ELECTRICAL CIRCUITS 2 - CLASS NO. 4 (19.03.2024)

### AIR-CORE TRANSFORMER

\* circuit diagram

$\underline{U}_1$  - primary voltage  
 $\underline{I}_1$  - primary current  
 $\underline{U}_2$  - secondary voltage  
 $\underline{I}_2$  - secondary current  
 $Z_L$  - load impedance

\* equations

$$\begin{cases} R_1 \underline{I}_1 + j\omega L_1 \underline{I}_1 - j\omega M \underline{I}_2 = \underline{U}_1 \\ R_2 \underline{I}_2 + j\omega L_2 \underline{I}_2 - j\omega M \underline{I}_1 + Z_L \underline{I}_2 = 0 \end{cases}$$

\* equations (open-circuited output),  $Z_L \rightarrow \infty, \underline{I}_2 = 0$

$$\begin{cases} R_1 \underline{I}_1 + j\omega L_1 \underline{I}_1 = \underline{U}_1 \\ -j\omega M \underline{I}_1 = \underline{U}_2 \end{cases}$$

\* equations (short-circuited output),  $Z_L = 0, \underline{U}_2 = 0$

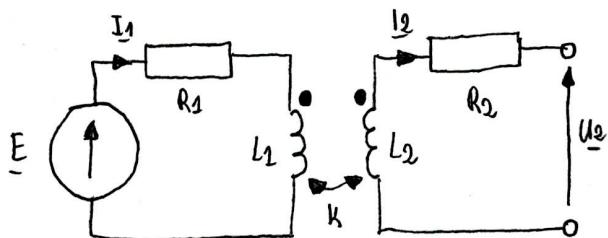

$$\begin{cases} R_1 \underline{I}_1 + j\omega L_1 \underline{I}_1 - j\omega M \underline{I}_2 = \underline{U}_1 \\ R_2 \underline{I}_2 + j\omega L_2 \underline{I}_2 - j\omega M \underline{I}_1 = 0 \end{cases}$$

**PROBLEM #1**

The air transformer was connected to the voltage source  $E$ . Calculate the readings of:

a) ammeter, b) voltmeter, connected to the terminals of the secondary winding.

$$E = 200V, k=0.8, R_1=R_2=20\Omega, X_{L1}=X_{L2}=40\Omega.$$

$$M = k \sqrt{L_1 \cdot L_2} \quad X_M = k \sqrt{X_{L1} \cdot X_{L2}} = 0.8 \sqrt{40^2} = 0.8 \cdot 40 = 32\Omega$$

a) ammeter - short circuit in the secondary winding

$$\begin{cases} R_1 \underline{I}_1 + j X_{L1} \underline{I}_1 - j X_M \underline{I}_2 = E \\ -j X_M \underline{I}_1 + R_2 \underline{I}_2 + j X_{L2} \underline{I}_2 = 0 \end{cases} \quad W = \begin{vmatrix} 20+j40 & -j32 \\ -j32 & 20+j40 \end{vmatrix} = -176+j1600$$

$$\begin{cases} 20\underline{I}_1 + j40\underline{I}_1 - j32\underline{I}_2 = 200 \\ -j32\underline{I}_1 + 20\underline{I}_2 + j40\underline{I}_2 = 0 \end{cases} \quad W_I = \begin{vmatrix} 200 & -j32 \\ 0 & 20+j40 \end{vmatrix} = 4000+j8000$$

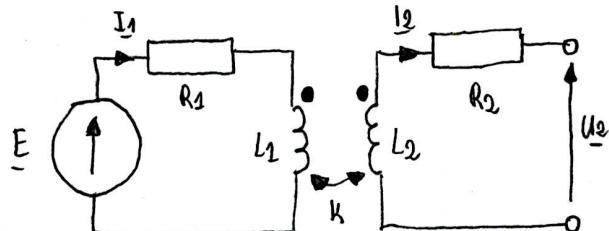

$$\begin{cases} (20+j40) \underline{I}_1 - j32 \underline{I}_2 = 200 \\ -j32 \underline{I}_1 + (20+j40) \underline{I}_2 = 0 \end{cases} \quad W_{II} = \begin{vmatrix} 20+j40 & 200 \\ -j32 & 0 \end{vmatrix} = 0+j6400$$

$$\underline{I}_1 = \frac{W_I}{W} = \frac{4000+j8000}{-176+j1600} = (4.6685-j30.135)A$$

$$\underline{I}_2 = \frac{W_{II}}{W} = \frac{j6400}{-176+j1600} = (3.9522-j0.4347)A$$

$$|\underline{I}_2| = 3.996 A$$

b) voltmeter - open circuit in the secondary winding,  $\underline{I}_2 = 0A$

$$R_1 \underline{I}_1 + j X_{L1} \underline{I}_1 = E$$

$$(R_1 + j X_{L1}) \underline{I}_1 = E \rightarrow \underline{I}_1 = \frac{E}{R_1 + j X_{L1}} = \frac{200}{20+j40} = (2-4j)A$$

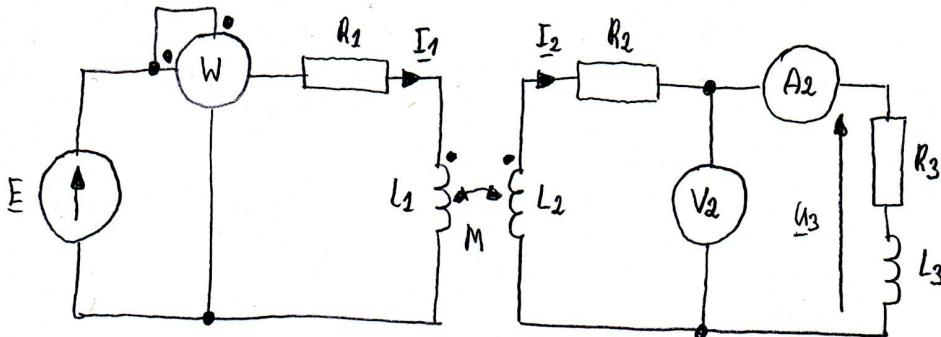

$$\underline{U}_2 = -j X_M \underline{I}_1 = j32(2-4j) = (128+j64)V$$

$$|\underline{U}_2| = 143.1086 V$$

**PROBLEM #2**

For the circuit below determine the results of measurements.

$$E = 230V, R_1 = X_{L_2} = X_M = 10\Omega, R_2 = 5\Omega, R_3 = X_{L_1} = X_{L_3} = 20\Omega.$$

$$\begin{cases} R_1 \underline{I}_1 + j X_{L_1} \underline{I}_2 - j X_M \underline{I}_2 = E \\ R_2 \underline{I}_2 + j X_{L_2} \underline{I}_2 - j X_M \underline{I}_1 + R_3 \underline{I}_2 + j X_{L_3} \underline{I}_2 = 0 \end{cases}$$

$$W = \begin{vmatrix} 10+j20 & -j10 \\ -j10 & 25+j30 \end{vmatrix} = -250+j800$$

$$\begin{cases} 10\underline{I}_1 + j20\underline{I}_1 - j10\underline{I}_2 = 230 \\ 5\underline{I}_2 + j10\underline{I}_2 - j10\underline{I}_1 + 20\underline{I}_2 + j20\underline{I}_2 = 0 \end{cases}$$

$$W_1 = \begin{vmatrix} 230 & -j10 \\ 0 & 25+j30 \end{vmatrix} = 5750+j6900$$

$$\begin{cases} (10+j20)\underline{I}_1 + (-j10)\underline{I}_2 = 230 \\ (-j10)\underline{I}_1 + (25+j30)\underline{I}_2 = 0 \end{cases}$$

$$W_2 = \begin{vmatrix} 10+j20 & 230 \\ -j10 & 0 \end{vmatrix} = j2300$$

$$\underline{I}_1 = \frac{W_1}{W} = \frac{5750+j6900}{-250+j800} = (5.81-j9.00)A$$

$$\underline{I}_2 = \frac{W_2}{W} = \frac{j2300}{-250+j800} = (2.62-j0.82)A$$

$$P_W = \operatorname{Re}[E \cdot \underline{I}_1^*] = \operatorname{Re}[230 \cdot (5.81-j9.00)] = \operatorname{Re}[1336.3-j2070] = 1336.3 \text{ W}$$

$$I_{A2} = |\underline{I}_2| = \sqrt{2.62^2 + 0.82^2} = 2.75 \text{ A}$$

$$U_{V2} = |\underline{U}_3| = |(R_3+jX_{L_3}) \cdot \underline{I}_2| = |(20+j20) \cdot (2.62-j0.82)| = |68.8+j36| = 77.65 \text{ V}$$
